Lyngstrand

The Lyngstrand range was developed more than 10 years ago in close cooperation with a group of architects. The system has inward opening tilt and turn sashes with extremely slim profiles. This is the perfect window for renovations, ensuring that the existing architecture is maintained without compromising today's demands for insulation, hardware, sound insulation etc. The slim profiles also enable a window suitable for new builds in which an aesthetically beautiful window with good natural light is desired.

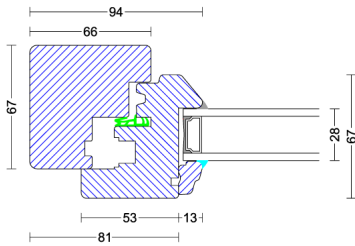

Hardware

Lyngstrand may be manufactured as a sidehung, tilt and turn or tilt window with multi point anodised hardware from Maka. All hinges are 3D adjustable ensuring optimal adjustment of all sashes. Window handles are optional extras, which can be seen under Accessories page 52.
